Task 1: Wireframing & Low-Fidelity Design

Project Title:

Food Delivery Mobile Application

1. Project Overview

Objective:

The purpose of this project is to create a low-fidelity wireframe for a food delivery mobile application. The wireframe represents the basic structure, layout, and user flow of the application before creating the final UI design.

Design Tool Used:

- Figma

Design Type:

- Mobile Application Wireframe
 - Low-Fidelity Design
-

2. Application Goal

The Food Delivery application allows users to:

- Browse available food items
- Search for restaurants and dishes
- View food details
- Add items to cart
- Place orders easily

The wireframe focuses on creating a simple and user-friendly experience.

3. User Flow

The basic navigation flow of the application:

Splash Screen

↓

Login / Sign Up

↓

Home Screen

Food Details

Add To Cart

Cart Screen

Checkout

4. Screen Details

Screen 1: Splash Screen

Purpose:

The splash screen introduces the application to users when they open the app.

Components:

- Application Logo
- Application Name
- Get Started Button

User Action:

User clicks the "Get Started" button to continue to the login page.

(Add Splash Screen Wireframe Image Here)

Screen 2: Login Screen

Purpose:

Allows existing users to access their accounts.

Components:

- Email input field
- Password input field
- Login button
- Forgot password option

- Create account option

User Action:

User enters login details and proceeds to the home screen.

(Add Login Screen Wireframe Image Here)

Screen 3: Home Screen**Purpose:**

Allows users to explore food items and categories.

Components:

- Search bar
- Food categories
- Popular food section
- Food cards
- Navigation menu

User Action:

User searches or selects a food item to view details.

(Add Home Screen Wireframe Image Here)

Screen 4: Food Details Screen**Purpose:**

Provides detailed information about selected food.

Components:

- Food image placeholder
- Food name
- Food description
- Price
- Add to Cart button

User Action:

User reviews food information and adds the item to the cart.

(Add Food Details Wireframe Image Here)

Screen 5: Cart Screen

Purpose:

Displays selected food items before checkout.

Components:

- Selected food items
- Quantity
- Price details
- Total amount
- Checkout button

User Action:

User confirms order and proceeds to checkout.

(Add Cart Screen Wireframe Image Here)

5. Design Principles Followed

Simplicity:

The wireframe uses simple layouts to make navigation easy.

Consistency:

All screens follow the same structure and spacing.

User Experience:

The design focuses on reducing user effort while ordering food.

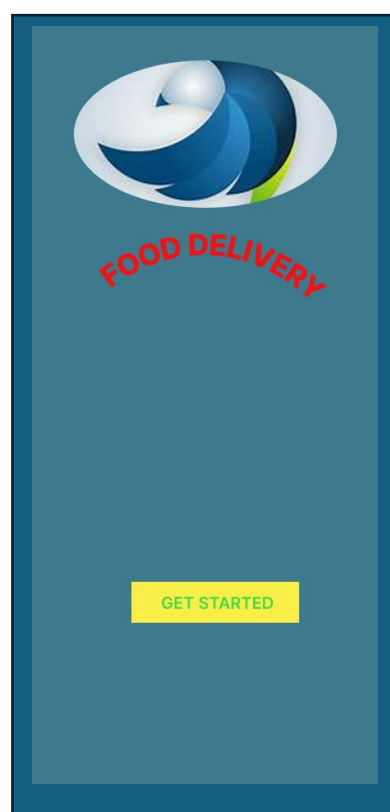

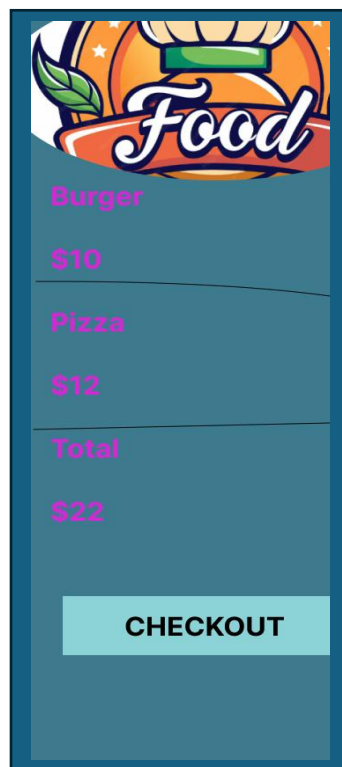

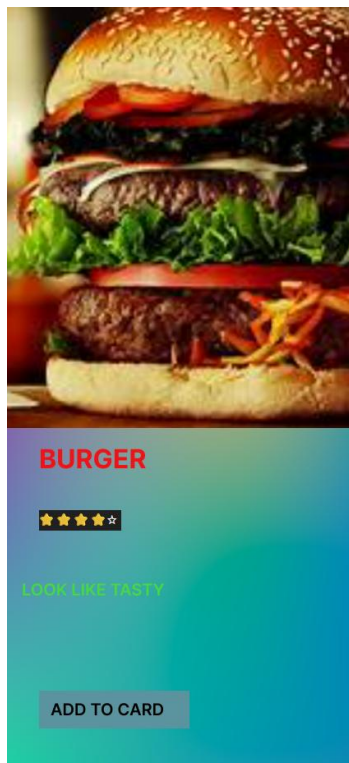

Clear Navigation:

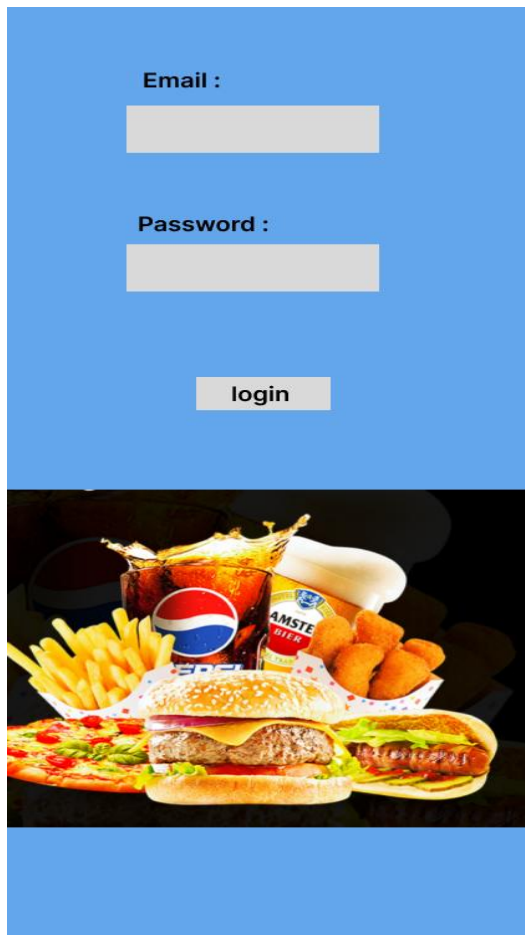

Buttons and actions are placed clearly for better usability.

6. Future Improvements

The application can be improved by adding:

- Restaurant profiles
 - Online payment system
 - Order tracking
 - User reviews and ratings
 - Personalized food recommendations
-

7. Conclusion

This low-fidelity wireframe provides the basic structure of a Food Delivery application. It helps visualize the user journey and acts as a foundation for developing the high-fidelity UI design.
